Vendor:IBM

Exam Code:A2090-619

Exam Name: Assessment: Informix Server 12.10 Assessment

Version: Demo

QUESTION 1

Which two actions can you perform with ontape? (Choose two.)

A. Backup to cloud

B. Restartable restore

C. Backup specific storage spaces

D. Restore specific storage spaces

E. Parallel backup of storage spaces

Correct Answer: AD

QUESTION 2

Which is NOT a component of the IBM Mobile Database offering?

A. IBM DB2

B. IBM Informix

C. IBM solidDB

D. IBM InfoSphere Warehouse

Correct Answer: D

QUESTION 3

Which configuration parameter can toggle the automatic expansion of storage spaces?

A. SP_AUTOGROW

B. SP_AUTO_SPACE

C. SP_AUTOEXPAND

D. SP_EXPAND_ENABLE

Correct Answer: C

QUESTION 4

Which is NOT a feature of onbar backups?

A. The ability to parallelize backups.

B. The ability to do a point-in-time restore.

C. The ability to backup without a storage manager.

D. The ability to do an external backup using a Storage Area Network.

Correct Answer: C

QUESTION 5

You have started a violations table for a target table with a non default name. (For example: "START VIOLATIONS TABLE FOR customer USING exceptions, reasons;"). How can you determine the relationship between the violations table and the target table later?

A. Using dbschema utility

B. Using \\'oncheck -pT\\' command

C. Querying sysdepends system catalog table

D. Querying sysviolations system catalog table

Correct Answer: D

QUESTION 6

Which parameter is used to enable transactions to complete after failover of the primary server?

A. HA_FOC_ORDER

B. FAILOVER_CALLBACK

C. CLUSTER_TXN_SCOPE

D. FAILOVER_TX_TIMEOUT

Correct Answer: D

QUESTION 7

The IBM Mobile Database is a mobile-optimized version of which IBM product?

A. IBM DB2

B. IBM Informix

C. IBM solidDB

D. IBM Cloudscape

Correct Answer: C

QUESTION 8

Which threshold setting applies when configuring automatic memory management?

A. SHMTOTAL

B. BUFFERPOOL

C. SHMVIRTSIZE

D. DS_TOTAL_MEMORY

Correct Answer: A

QUESTION 9

An Enterprise Replication server is a primary server for shared-disk secondary servers. The DBA wants to reduce the replication latency by reducing the number of transactions that are applied before the logs are flushed to disk. What configuration parameter should the DBA modify?

A. CDR_MAX_TXNS

B. CDR_TSINSTANCEID

C. CDR_MAX_FLUSH_SIZE

D. CDR_LOG_LAG_ACTION

Correct Answer: C

QUESTION 10

Where are the Primary Storage Manager catalog tables stored?

A. sysutils database

B. sysadmin database

C. sysmaster database

D. A location as specified by the PSM_CATALOG_PATH configuration parameter

Correct Answer: D

QUESTION 11

Which action can be taken if an instance is down?

A. A point-in-time mixed restore.

B. Warm restore of non-critical storage spaces.

C. Cold restore by onbar using storage space backups taken by ontape on tape devices.

D. A mixed restore using onbar whole system backup and incremental dbspace level backups.

Correct Answer: A

QUESTION 12

Which fragmentation strategy is capable of generating new fragments automatically?

A. Fragment by List

B. Fragment by Range

C. Fragment By Expression

D. Fragment by Round Robin

Correct Answer: B
