QUESTION 2

Which mechanism does the FireAMP Connector use to avoid conflicts with other security applications such as antivirus products?

A. exclusions

B. virtualization

C. containers

D. sandboxing

Correct Answer: A

To prevent conflicts between the FireAMP Connector and antivirus or other security software, you must create exclusions so that the Connector doesn\\'t scan your antivirus directory and your antivirus doesn\\'t scan the Connector directory. This can create problems if antivirus signatures contain strings that the Connector sees as malicious or cause issues with quarantined files. The first step is to create an exclusion by navigating to Management > Exclusions in the FireAMP

console.

D. aaa accounting connection start-stop tacacs+

E. aaa accounting commands 15 start-stop tacacs+

Correct Answer: C

http://www.cisco.com/en/US/docs/ios/security/command/reference/sec_book.html aaa accounting To enable authentication, authorization, and accounting (AAA) accounting of requested services for billing or security purposes

when you use RADIUS or TACACS+, use the aaa accounting command in global configuration mode or template configuration mode. To disable AAA accounting, use the no form of this command. aaa accounting {auth-proxy | system | network | exec | connection | commands level | dot1x} {default | list-name | guarantee-first} [vrf vrf-name] {start-stop | stop-only | none} [broadcast] {radius | group group-name} no aaa accounting {auth-proxy | system | network | exec | connection | commands level | dot1x} {default | listname | guarantee-first} [vrf vrf-name] {start-stop | stop-only | none} [broadcast] {radius | group group-name} exec Runs accounting for the EXEC shell session. start-stop Sends a "start" accounting notice at the beginning of a process and a "stop" accounting notice at the end of a process. The "start" accounting record is sent in the background. The requested user process begins regardless of whether the "start" accounting notice was received by the accounting server.
