Vendor:IBM

Exam Code:C2160-669

Exam Name:SOA Fundamentals [2008]

Version: Demo

QUESTION 1

Access services represent which vital function in the IBM SOA Reference Architecture?

A. Distributed role-based access control mechanisms

B. Connectivity with existing and legacy functionality

C. Additional security at gateway points between domains

D. Services exposed across different business units or organizations

Correct Answer: B

QUESTION 2

In applying SOA, which principle can reduce overall cost?

A. Reuse services across lines of business.

B. Build services for only the most important business functions.

C. Build general services that can perform a variety of business tasks.

D. Reimplement all services on a consistent hardware and software platform.

Correct Answer: A

QUESTION 3

What represents the business objective(s) to be achieved through SOA governance?

A. Attainment of business agility and competitive advantage

B. Assures the alignment of the business strategy with its SOA initiatives

C. Assures that service entities perform to the level and response times agreed upon

D. Assures the value of SOA to the business by focusing on the design and implementation of services

Correct Answer: B

QUESTION 4

In which situation would a manufacturing plant most likely choose to use an SOA approach for their Customer Order Analysis and Tracking System?

A. The company wanted development and operations to be as simple as possible.

B. The company wanted to break down department silos and encourage everyone to use the same set of tools.

C. Most of the company\\'s processes were manual or document-centric with little opportunity for automation.

D. The legacy system had grown in such a way that it was not easy to update and could not handle the emerging business demands.

Correct Answer: D

QUESTION 5

Which artifact is the most helpful to an organization\\'s SOA transformation and implementation roadmap?

A. A reference architecture

B. A service interface description

C. A Web services standards glossary

D. A proposed service registry document

Correct Answer: A

QUESTION 6

Which organization has the greatest need for SOA governance?

A. One that is structured around localized business representatives for the IT team(s).

B. One in which the departments are small, geographically centralized, and provide many goods and services.

C. One that is relatively large, geographically dispersed, and with a centralized management and funding structure.

D. One in which the funding, management and control of IT resources are spread among multiple stakeholders in different parts of the organization.

Correct Answer: D

QUESTION 7

A business has been \\'doing\\' SOA for a while and is becoming disillusioned with the results. They are not seeing the Return on Investment (ROI) they expected even though they have created several hundred services.

What is the likely cause of this problem?

A. Services are replicated based on language and geographic needs.

B. Developers need better training on how to create reusable services.

C. Governance processes are not in place to review and approve services.

D. Scaling the environment is challenging for such large SOA implementations.

Correct Answer: C

QUESTION 8

What is a key difference between a component and a service?

A. A service is deployed once and a component is deployed many times.

B. A component is deployed once and a service is deployed many times.

C. A component has an interface and a service implements the interface.

D. A service has an interface and a component implements the interface.

E. A service does not have a well-defined interface and a component does.

Correct Answer: D

QUESTION 9

When is the location of the service provider first determined in the SOA lifecycle?

A. Model business process and design according to requirements

B. Construct and assemble service components

C. Configure and deploy from test through production

D. Manage to business and IT goals

Correct Answer: C

QUESTION 10

Which is a driving business need for SOA?

A. Automate and optimize processes

B. Security, governance and infrastructure

C. Governance, infrastructure and connectivity

D. Interoperability, standards and application integration

E. High availability of hardware, operational systems and services

Correct Answer: A

QUESTION 11

What is one purpose of an Enterprise Service Bus (ESB) in SOA management and governance?

A. It allows load balancing across multiple services.

B. It provides pre-built components called mediation primitives.

C. It hides interface details from Key Performance Indicators (KPIs).

D. Physically moving a service requires modification to all other components that use it.

Correct Answer: C

QUESTION 12

When releasing a new service version, which changes to the WSDL document are backwardcompatible?

A. Adding an operation

B. Removing an operation

C. Renaming an operation

D. Changing the parameters of an operation

Correct Answer: A
