Vendor:IBM

Exam Code:C9060-511

Exam Name:IBM Tivoli Storage Manager V7.1
Implementation

Version: Demo

QUESTION 1

Why would an IBM Tivoli Storage Manager (TSM) trace be run?

A. To find a lost encryption key.

B. To filter messages from the active log.

C. To help troubleshoot at the request of Level 2 Support.

D. To check the data path between the TSM client and server.

Correct Answer: D

QUESTION 2

Which export statement allows for an individual filespace to be specified as an option?

A. export node

B. export policy

C. export server

D. export admin

Correct Answer: A

QUESTION 3

A new tape library has been received. The latest driver is installed and the new tape drives are listed as /

dev/rmtX and /dev/smcX using the command:

1sdev -Cc tape

Before defining the device class what is the correct setup for the hardware?

A. Install the Server Tool Library.

B. The Tivoli Storage Manager server sets up the hardware automatically.

C. Define the library, define the path to the library, define drive, and then define the path to the drive.

D. Define the drive, define the path to the drive, define the library, and then define the path to the library.

Correct Answer: C

QUESTION 4

The Tivoli Storage Manager server and client are connected to a TCP/IP network. How can the connection to one of the clients be tested?

A. PING

B. NET STAT

C. NSLOOKUP

D. IFCONFIG

Correct Answer: A

QUESTION 5

How is the IBM Tivoli Storage Manager (TSM) V7.1 administrative client installed?

A. It is an option during the client installation.

B. It is an option during the server installation.

C. It is installed by default with the TSM client.

D. It is installed by default with the TSM server.

Correct Answer: D

QUESTION 6

A. It registers TSM clients.

B. It registers Operations Center users.

C. It offers advanced password rule enforcement.

D. It enables TSM to use simple password rules.

Correct Answer: D

QUESTION 7

An Oracle database is protected with IBM Tivoli Storage Manager (TSM) for Database and Oracle Recovery Manager. The Service Level Agreement defines that the logs must be written twice and immediately during the log archiving process. The storage pool destination is a sequential file pool and the data cannot be mirrored. How can this requirement be fulfilled?

A. Use the Simultaneous Write function during migration.

B. Use the Mirror option in the TSM API option file tdpo.opt.

C. Use the Simultaneous Write function from the client during backup.

D. Take the backup of the logs twice to different storage pool destinations.

Correct Answer: B

QUESTION 8

The IT department is requesting a disaster test of the Tivoli Storage Manager (TSM) server. The test is on a server set up without any graphical assistance. Which step is required for a successful TSM database restore?

A. Update the server option file.

B. Configure a DB2 API interface.

C. Replace the volume history file.

D. Generate a database backup copy.

Correct Answer: D

QUESTION 9

When would an automatic reorganization occur in the Tivoli Storage Manager (TSM) database?

A. After a large backup.

B. After the server has been reinitialized.

C. Once a week after a TSM database backup.

D. After a large amount of data has been deleted from the TSM server.

Correct Answer: C

QUESTION 10

A customer has installed IBM Tivoli Storage FlashCopy Manager (FCM) on server CSISQL05 and is successfully creating snapshots locally for a Microsoft SQL (MS SQL) database. What must be done so they can back up the MS/SQL snapshots to IBM Tivoli Storage Manager (TSM)?

A. Configure TSM for Databases (MS SQL) on the server CSISQL05.

B. Run the TSM for Databases (MS SQL) license wizard that is part of FCM.

C. Install TSM for Databases (MS SQL) on the server that will function as the proxy server.

D. Click the Failed button on the Requirements Check screen, browse to the license file location, and select it.

Correct Answer: A

QUESTION 11

Which parameter of an archive copy group sets a specific retention period that must be met before a file qualifies for expiration?

A. retain last

B. retain extra

C. retain version

D. version deleted

Correct Answer: B

QUESTION 12

A customer has configured node replication for the first time. To validate replication for a specific node, the administrator needs to confirm which two configurations to ensure successful validation?

A. REPLNODE=yes on the source server.

B. REPLICATION=yes on the source server.

C. REPLSTATE=enabled for node on the source server.

D. Set the target replication server from the target server.

E. Set the target replication server from the source server.

Correct Answer: CE
