Vendor: IBM

Exam Code: COG-122

Exam Name: IBM Cognos 8 BI Author

Version: Demo

QUESTION NO: 1

An administrator creates a shortcut that points to an invoice report. What happens if the invoice report is renamed?

- A. The shortcut contains the original name and can be used to view the latest output before the report was renamed.
- B. The shortcut contains the original name and no longer works because the link to the report is broken.
- C. Cognos Connection automatically updates the report name in the shortcut, and the shortcut remains fully functional.
- D. Cognos Connection automatically deletes the shortcut.

Answer: B

QUESTION NO: 2

In Cognos Connection, how can an administrator specify different prompt values and run options for a report without modifying the report itself?

- A. Schedule a report.
- B. Create a report view.
- C. Produce a report output.
- D. Burst a report.

Answer: B

QUESTION NO: 3

Which statement describes Cognos 8 BI architecture?

- A. Communication between components is SOAP on HTTP Protocol.
- B. The BIBus is the communication tier of the Cognos 8 BI architecture.
- C. The two-tiered architecture is component based and typically separated by firewalls.
- D. The content manager consists of a set of protocols governing communication among Cognos BI services.

Answer: A

QUESTION NO: 4

Which is a function of the first tier in the Cognos 8 BI architecture?

- A. Authenticate users to the correct namespace.
- B. Pass requests to a Cognos 8 BI dispatcher for processing.
- C. Render the Cognos Connection and Metric Studio interfaces.
- D. Start Cognos 8 BI services configured and enabled on a computer.

Answer: B

QUESTION NO: 5

What is one of the purposes of Tomcat in the Cognos 8 BI environment?

- A. Acts as a Java servlet container for the report and batch report services.
- B. Monitors the dispatcher and all user requests are lost upon failure.
- C. Monitors the Cognos 8 service and restarts the service upon failure.
- D. Acts as a Java servlet container for the presentation service.

Answer: D

QUESTION NO: 6

Which statement is true about the definition of the Application tier?

- A. The Application tier hosts the dispatcher and content manager that reside in a servlet container.
- B. The Application tier hosts the dispatcher, which includes the Cognos Application Firewall and Access Manager.
- C. The Application tier hosts the BI server and the content store.
- D. The Application tier hosts the content manager, which contains data such as a report specification, Cognos namespace, and so on.

Answer: A

QUESTION NO: 7

When installing and configuring a standby Content Manager, what must the administrator do to ensure failover?

- A. Configure the content store to know the location of all standby Content Managers.
- B. Install the first standby Content Manager on the machine with the highest processor speed.
- C. Ensure that services are started on the machines hosting the standby Content Managers before they are started on the machine hosting the default active Content Manager.
- D. Configure authentication providers the same way on all machines hosting Content Managers.

Answer: D

QUESTION NO: 8

Computer 1 is set up as a gateway.

Computer 2 is set up as a report server.

Computer 3 is set up as a report server and a failover content manager.

Computer 4 is set up as the default content manager.

Where does the administrator need to disable anonymous access?

- A. Computers 1, 2, and 3 only
- B. Computers 3 and 4 only
- C. Computers 2 and 3 only
- D. Computer 4 only

Answer: B

QUESTION NO: 9

Computer 1 is set up as a gateway.

Computer 2 is set up as a report server.

Computer 3 is set up as a report server.

Computer 4 is set up as a content manager.

When configuring, why must the administrator configure and start services for the machine hosting the content manager first?

- A. To ensure that the Gateway URI property is specified on the content manager computer before the dispatcher is configured and services started.
- B. To ensure that the certificate authority service is available to issue certificates to other computers in the distributed installation.
- C. To ensure that the BI server can connect to the underlying reporting data sources.
- D. To ensure that the Dispatcher URIs for gateway property is specified on the content manger computer before the dispatcher is configured and services started.

Answer: B
