Answer: C, D

Question: 12
You work in an international company which is called Wiikigo. And you're employed as the Developer for Microsoft Dynamics NAV. Now you have to get user input by opening a page. Before the page is opened, you have to pass in some set-up values to control the data to be collected on the page. For instance, the Customer No. and Customer Name need to be passed in. For the Customer, you will generate Sales Orders for the Customer by using the information gathered after this page runs. What is the right way to run the page from code?

A. The PAGE.RUN(PAGE) function should be used.
B. The PAGE.RUNMODAL(PAGE) function should be used.
C. After a variable is created for the page, the PageVariable.RUN methodshould be used.
D. After a variable is created for the page, the PageVariable.RUNMODAL method should be used.

Answer: D

Question: 13
You work in an international company which is called Wiikigo. And you're employed as the Developer for Microsoft Dynamics NAV. There is a colleague who is named John in the company. He is not clear about what Microsoft Dynamics NAV Object types Web services support. Since you are the technical support, he asks for your answer. So what is your answer? (choose more than one)

A. Web services support Report Objects
B. Web services support Codeunits
C. Web services support Page Objects
D. Web services support Table Objects

Answer: B, C

Question: 14
You work in an international company which is called Wiikigo. And you're employed as the Developer for Microsoft Dynamics NAV. There is a colleague who is named John in the company. The company wants to have an XMLport created to have the data imported in an XML document. The company assigns this task to him. First he plans to specify all the XML node names and the type for each node, making it clear whether each node represents an element or an attribute. But he is not clear about what he should do next. Since you are the technical support, he asks for your answer. So what is your answer?

A. Documentation should be added to the documentation trigger in the XMLPort.
B. After you change all data structure, you should save them.
C. For the imported data, you should create a temporary location by using the XML structure.
D. These node names should be mapped to corresponding data structures (tables, records, or fields) in the Microsoft Dynamics NAV database.

Answer: D

Question: 95

You work in an international company which is called Wiikigo. And you're employed as the Developer for Microsoft Dynamics NAV. You are appointed to work with a client. You receive a report from your user saying that the data is not being written to the ledgers as they expected when he is able to post his receivables this month. You have to find out the reason for this problem. After check, you can only identify that it may be user error or a problem caused by modifications that were done, it might also be a bug in the base program. In order to find out whether the modifications have something to do with it, what is the simplest way to achieve this?

A. Review the documentation for the modifications to identify if they affected the posting routines.
B. A record and step should be posted through the code using the Debugger with BreakPoint on Triggers selected.
C. The records should be posted with Code Coverage turned on, and then you should check the code that was processed.
D. You can identify where the problem is by using a combination of Client Monitor and Microsoft Office Excel pivot tables.

Answer: C
