QUESTION 6

Your network contains an Active Directory domain.

You deploy an Azure AD tenant.

Another administrator configures the domain to synchronize to Azure AD.

You discover that 10 user accounts in an organizational unit (OU) are NOT synchronized to Azure AD. All the other user accounts synchronized successfully.

You review Azure AD Connect Health and discover that all the user account synchronizations completed successfully.

You need to ensure that the 10 user accounts are synchronized to Azure AD.

Solution: You run idfix.exe and export the 10 user accounts.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

The question states that "all the user account synchronizations completed successfully". If there were problems with the 10 accounts that needed fixing with idfix.exe, there would have been synchronization errors in Azure AD Connect Health.

It is likely that the 10 user accounts are being excluded from the synchronization cycle by a filtering rule.

You need to ensure that User2 can access the resources in Azure AD.

Solution: From the Microsoft Entra admin center, you add fabrikam.com as a custom domain. You instruct User2 to sign in as user2@fabrikam.com.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

The on-premises Active Directory domain is named contoso.com. To enable users to sign on using a different UPN (different domain), you need to add the domain to Microsoft 365 as a custom domain.
